

# The NCCR ChemBio outreach programme

Nolwenn Chavan • Science communicator  
NCCR Chemical Biology

## Get out of your scientific comfort zone and develop new skills.

This is an interactive poster.  
Click on a **?** to know more.

## Why should you do it?

### Improving your «soft skills»

Activities in outreach are a great way to improve your communication and leadership skills, which are essential tools for any career.

### Getting out of your lab

Meeting people from different lines of work is an opportunity for networking, and practicing a different activity stimulates your creativity: a good recipe for a successful career!

### Inspiring the next generation of scientists

Think back: who inspired you to get into science? You could be that person for someone else.
